

Young Unlikely To Die From COVID-19. Nearly 95% Of Deaths People Age 50+

Should our response vary by age? Are the ones with the least to lose from COVID-19 sacrificing the most?

Common Causes of Death In Children & Teens Jan 2020 - October 2021

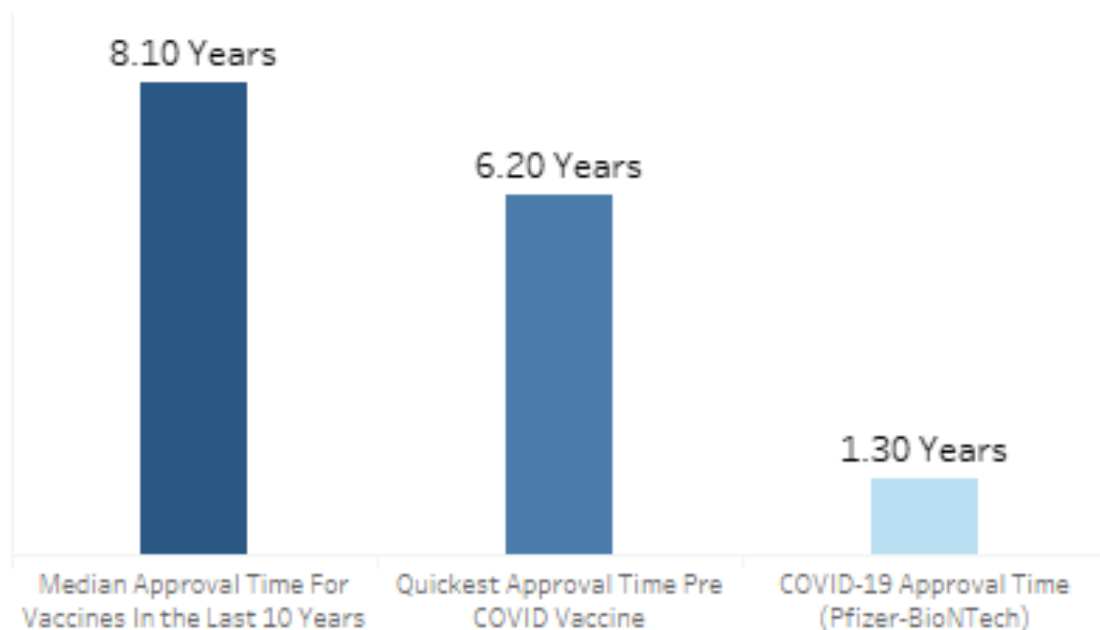

Source: Hamer, Gale et al, 2020 (UK) (n=334,329)

Death Count & Fatality Rates

4M	50M	500M	100M
COVID-19	Black Plague	Smallpox	Cancer

COVID-19	Black Plague	Smallpox	Cancer

Vaccine Approved In Record Time

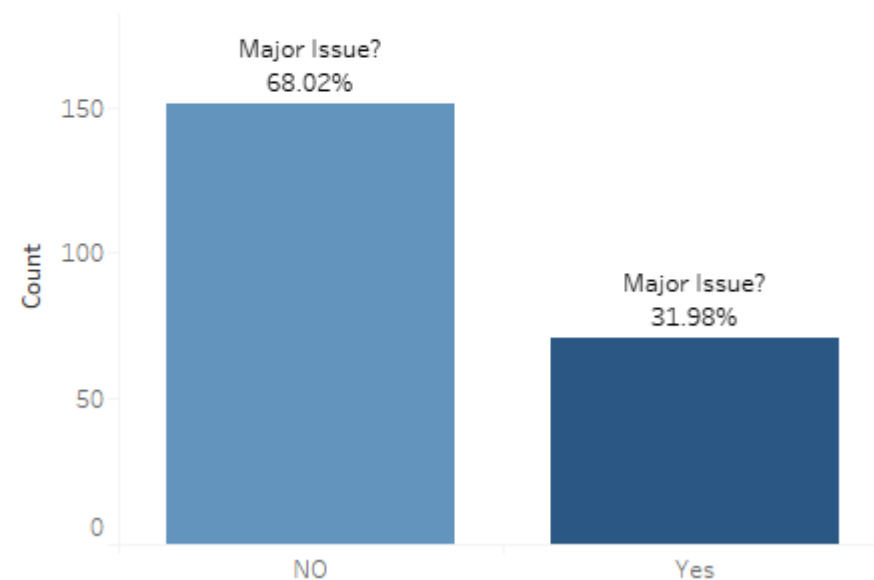

How can we assess long-term safety?

FDA Approved Drugs Found Unsafe:

Should we trust the FDA's lightning speed approval of the COVID-19 Vaccine?

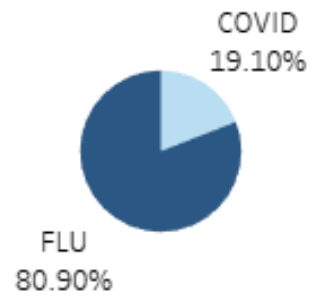

The Yale School of Medicine found that over 30% of drugs approved by the FDA from 2001 to 2010 had major safety issues. These issues were found, on average, four years after the lengthy approval process.

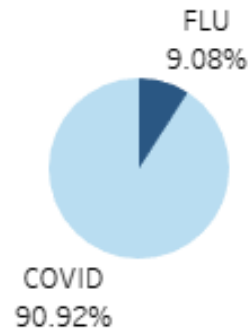

Vaccine Distribution & Adverse Events (USA)*

VAERS Adverse Events (Death)

Death

Vaccine Adverse Events (USA)*

Jan 2005 - Aug 2021

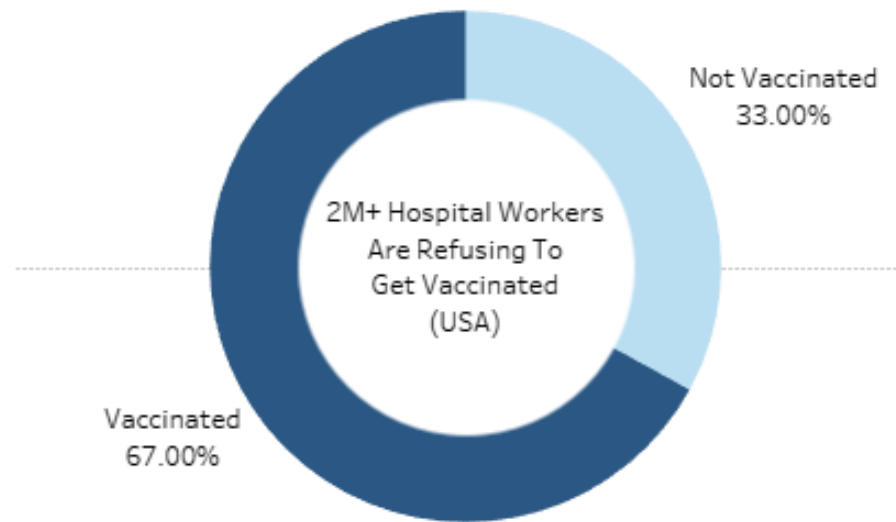

Is the vaccine worth the risk of an adverse event and unknown long-term effects? Nearly 60% of COVID-19 related hospitalizations in Israel are from vaccinated patients... Just how effective is the shot?

Adverse events reported to VAERS are not necessarily side effects caused by vaccination. An adverse event is a health problem that happens after vaccination that may or may not be caused by a vaccine. These events may require further investigation. By definition, a side effect has been shown to be linked to a vaccine by scientific studies.

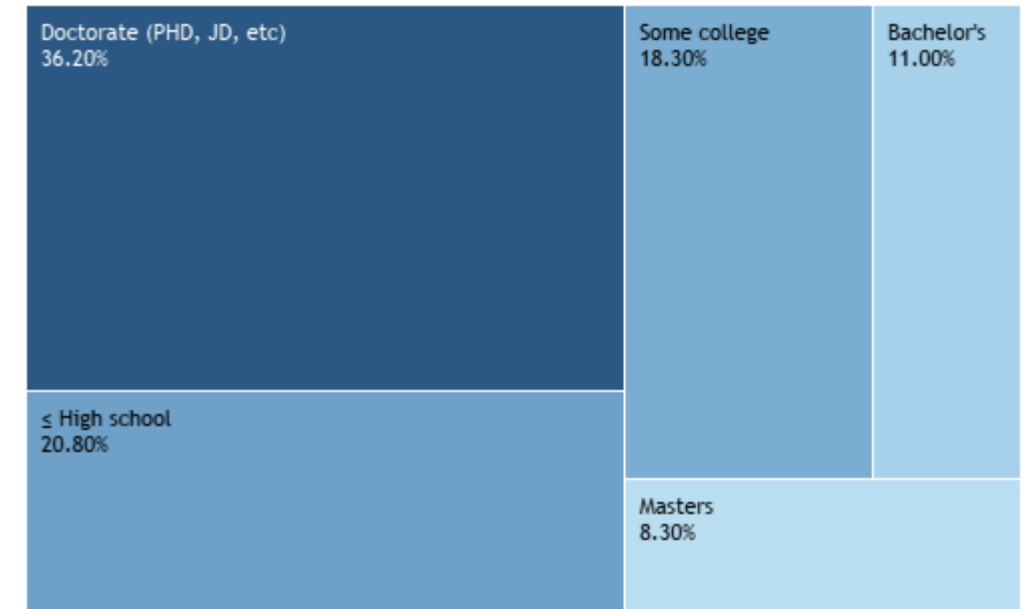

Nurses & Doctors Refusing Vaccination *

Estimates vary based on study. Number of unvaccinated would likely be larger without mandates forcing people to choose between their job and the vaccine. Some hospitals without mandates were 99% unvaccinated in mid-2021.

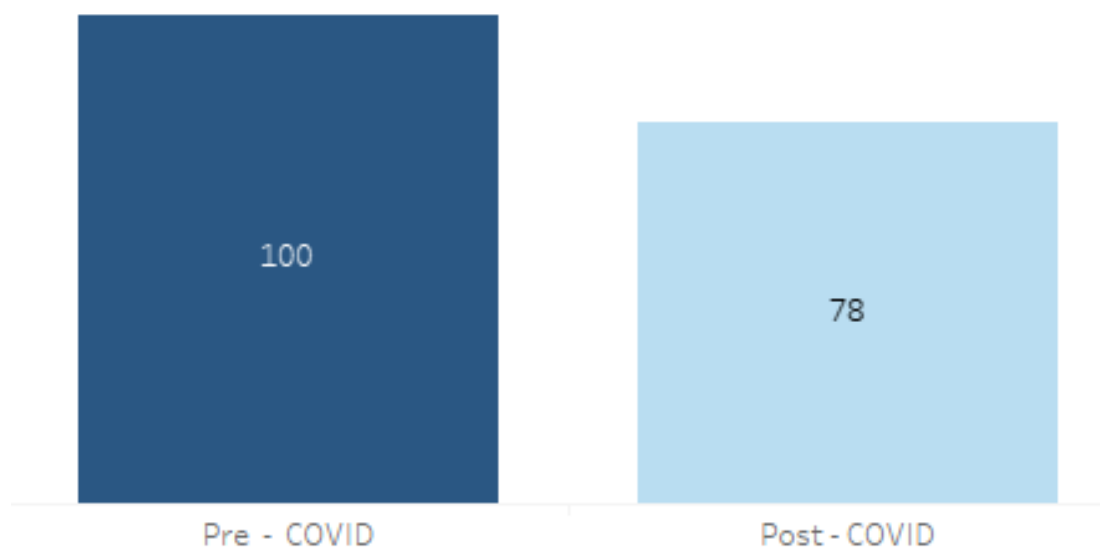

COVID-19 Vaccine Hesitancy by Education Level
